vein treatments

Effectively reduce the appearance of large blue-green colored veins.

Gently treat small red spider veins on the legs and face.

How does elōs vein treatment work?

Combined bi-polar radio frequency and light energies precisely target and heat the unwanted vein while protecting the surrounding skin.

Is elōs vein treatment right for me?

elōs is an effective treatment for most skin types. Small red spider veins on the face or lower body can be treated, as well as larger blue-green colored veins on the legs.

How much does it cost?

Treatment costs vary. Schedule a personalized consultation for more details.

When can I expect to see results?

Improvement may be seen after a single treatment. The total number of required treatment sessions depends on the extent and depth of the vascular lesions. Maximum clearance is typically achieved within 1-3 treatment sessions.

Does it hurt?

Treatment of leg veins may be uncomfortable for some patients. This is easily managed by using external cooling or application of a topical anesthetic cream prior to treatment. This is a no-downtime procedure. Many patients return to normal activities immediately after treatment.
